

The efficiencies of automation ... the impact of beautiful design ... the scalability of XML ... the flexibility of single-source publishing

A system that makes publishing easier, not harder

No more manual composition. Automated application of styles and branding. Built-in version and quality control. Flexible workflows. Faster production cycles with instant review and feedback. Familiar working environments. Sure sounds easier. That's because Typefi Publish is all about making publishing processes smoother and more productive.

Proven technology built on industry standards

From household names to niche publishers, our customers have tried and tested Typefi Publish in the toughest labs: the marketplace.

Industry standards are at the heart of Typefi Publish. We built it on authoring tools used regularly: Microsoft® Word, Inera® eXtyles, and other standard XML-editors. We chose the design software that professionals choose – Adobe® InDesign – to drive layout and design. We support industry-standard XML-DTDs: NLM, DITA, DocBooks, EPUB and DAISY. We also help publishers meet international accessibility standards as mandated by the United Nations.

A scalable solution that handles multiple formats

Print publishing, web publishing, ebooks, PDFs, custom or specific XML formats – Typefi Publish can handle it all. What's more, you can do all this from a single source at the press of a button. Now that's scalable.

Software that fits with your systems and processes

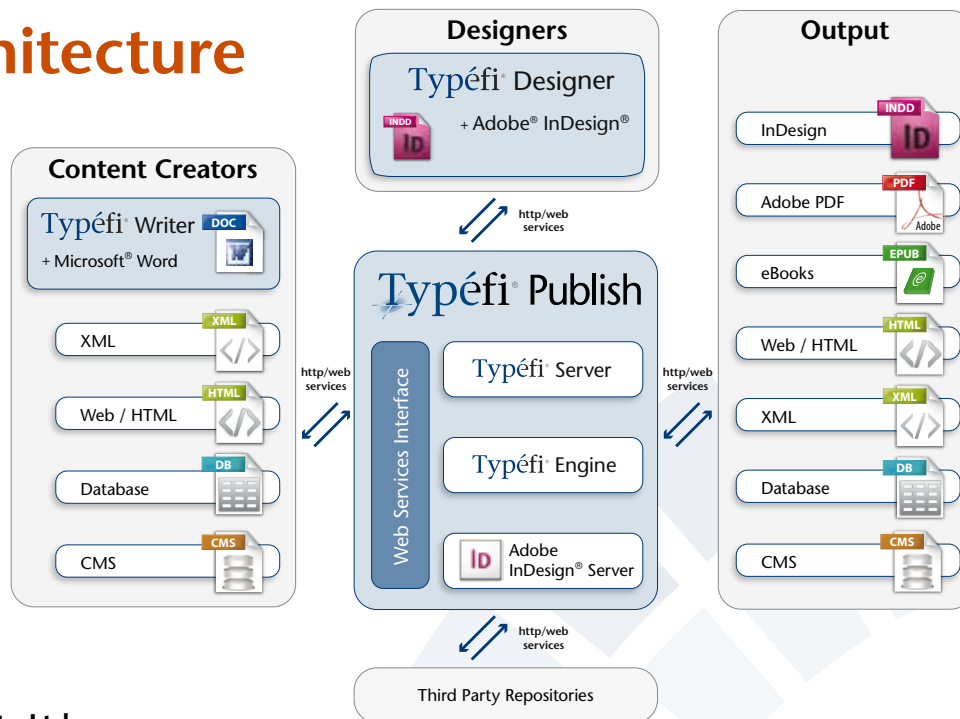

Typefi Publish plugs into widely-used tools such as Word, is run on standard PC and Mac desktops and servers, and is accessed via a web browser interface. Its core XML architecture means it is easily integrated with existing CMS and other systems.
